

Disti360

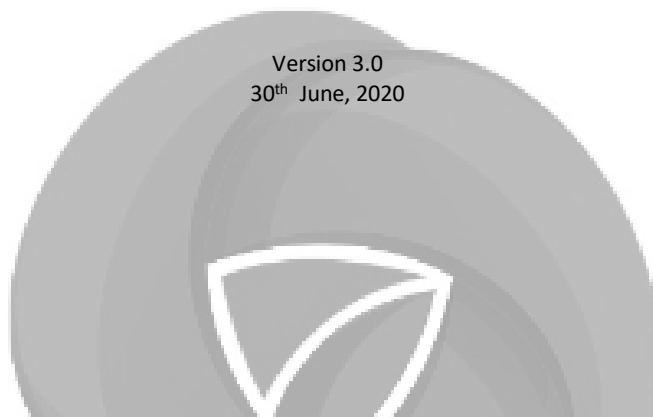

Hub of Virtual Distribution

A Project by

COMPANY **PROFILE**

Version 3.0
30th June, 2020

Welcome to Disti360

A new business, with a new vision, but with a long track record. That's Disti360. Our name is new, but our specialists have decades of experience in information security, information management and cybersecurity.

Disti360 is the hub of virtual distribution - where we take the virtualization as the concept across all sectors of the business. Internally and externally.

Disti360 is a project of Prevent360 - focusing on providing the market through its network of partners across the region with latest technology and best of breed.

It is vital in this era to be part of the digital transformation, support the initiative of cloud solutions, where our mission is to secure this transformation and be sure an easy and safe journey for our partners with their customers.

This positions Disti360 as unique cybersecurity distributor, headquartered in the Dubai, UAE, but serving partners regionally.

Our vendors are enjoying their dedicated virtual sales team, across the region, which will assure them that they will get the full attention regardless of their business volume or whoever is joining the platform of Disti360.

For us the salesman is the asset of this Virtual Distribution business model; he is the one who is managing the customer and has the full interest to keep his own reputation regardless of the company he is working for. So for that he we are building for him a special portal to keep him always in control and connected with his customer and his loyal distributor (Disti360)

Your security strategy shouldn't tell you what you can't do, it should help your organization to do what it does best.

Disti360 offers a comprehensive approach that protects—and agilely enables—your business.

Leadership

Abdullah Y. Abu-Hejleh

- Founder & CEO

A former Sales Director at two of - the leaders in security value-add distribution business in MENA.

Has nearly 15 years' experience at the heart of the channel both at leading distribution firms and vendors including Hewlette Packard and Compaq.

Mohammed Dwaik

- Co Founder / President of Group360
- GM of DATACELL
- COO of Disti360

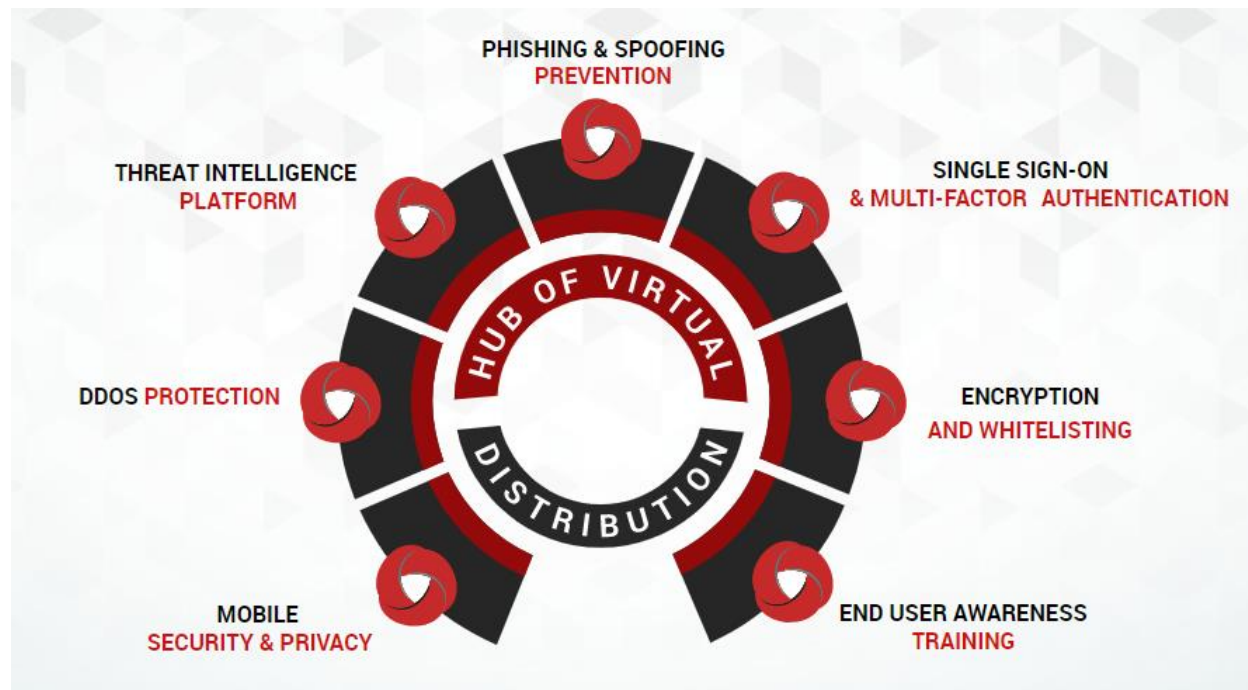

Yamam El Kochen

- Co Founder / VP-Sales of Group360
- VP – Sales of Disti360

Explore our **solutions**

Disti360 takes a holistic, architectural approach to your security infrastructure and leverages proven, industry-standard cybersecurity frameworks to align your security strategy to your business.

PowerDMARC

PowerDMARC empowers individuals and organizations to combat business email compromise (BEC) and email spoofing.

With the help of their proprietary AI and threat intelligence services, they ensure that customers only ever receive legitimate emails from you and protect your brand's reputation. They help you:

1. Prevent spoofed, impersonated emails
2. Protect your organization's reputation
3. Boost email reach & deliverability

PowerDMARC is a partner of Global Cyber Alliance and Cloud Security Alliance. Ready to prevent brand abuse, scams and gain full insight on your email channel? Visit their website to book a demo or start your 15-day free trial.

DriveLock

German company. Founded in 1999, we are now one of the leading international specialists for IT and data security.

We have set ourselves the goal of reliably protecting corporate data, devices and systems. To achieve this, we rely on the latest technologies, experienced security experts and solutions based on the Zero Trust model.

In today's security architecture, zero trust means a paradigm shift according to the maxim "Never trust, always verify".

DriveLock Zero Trust platform follows this principle. It combines the elements:

- Data protection
- Endpoint protection
- Endpoint Detection & Response
- Identity & Access Management

The fully integrated zero trust platform supports different operating systems, end devices and is offered as an on-premise solution and managed security service.

The solution is Made in Germany and "without a Backdoor".

RangeForce

RangeForce is building the world's most comprehensive cybersecurity simulation and skills analysis platform. We believe in the power of leveling up your SOC and cybersecurity staff by providing advanced cybersecurity defense training along with a method to accurately and quantitatively assess your team's true skills and capabilities. *** In the same way, airlines drill their pilots on emergency procedures to ensure that if something goes wrong, the flight crew is prepared to handle the emergency and land safely, RangeForce trains and then tests cyber pros on the latest attacks and attack methodologies. *** RangeForce delivers the industries only integrated cybersecurity simulation and skills analysis platform that combines a virtual cyber range with hands-on advanced cyberattack defense training. RangeForce's cloud-based cybersecurity training platform emulates real-life cybersecurity attacks in a complex enterprise systems landscape. *** Cyber and I.T. professionals from government, financial services, university, and hi-tech companies use RangeForce to qualify their new-hires, training up their DevOps, IT and Security Staff, and run CyberSiege simulations to evaluate team skills. *** By providing tangible defensive cyber warfare experience and performance-based skills measurement analytics engine, RangeForce ensures continuous evidence that teams are prepared against cybersecurity threats. Only RangeForce can accurately show you where your expertise gaps exist, fill those gaps, and accurately report on the entire process. *** Keep your systems secure with the help of the RangeForce Simulated Cyber Skills Platform!

Samoby

Samoby expands the security perimeter of companies in real time. It analyzes in real time connectivity and suspicious patterns on the mobile devices, apps and hardware. It acts as a mobile firewall, blocking granularly connectivity and apps when a threat is detected. The Samoby Open API integrates directly with SIEM to provide all the real time insight information. All the granular events happening on the device provides other sources of information for a complete forensic analysis when required. Samoby provides also real time mobile user experience and data cost control by setting data usage policies per app, network type and location. Samoby collects in real-time +120 parameters from mobile devices for operational intelligence (Digital experience, connectivity quality, proactive support), and granular data use and protection against security threats (MTD). Through its open API, it delivers real-time intelligence ready for integration or packaging with existing services like Enterprise Mobile Security, Monitoring of the mobile workplace, SAM – Software Asset Management, IT Asset Management, Managed Service Providers, MAM, MDM, and IoT. In many organizations, IT department struggles to keep apps and network infrastructure running smoothly, trying to solve problems proactively because it is much less costly to solve them before end-users and business processes are impacted. Today, with the explosion of Mobile Devices to be used for critical business processes, it is needed platform to proactively and in real time detect and solve issues in the mobile environment that would impact the business performance.
